3d modeling with Claude Code

Built with Claude

I have been trying to build a city builder game. I have a programming background but nothing in art/design or asset modeling, so I feared that would be pretty much impossible without buying/licensing assets from somewhere.

I tried big AI modeling services, but they all produced pretty weak results with obvious wrong planes/walls/roofs and a lack of detail.

Because of that, I decided to try my hand at it in Claude Code itself.

At first the models were extremely bad, much worse than the AI modeling tools — cubes and blobs with bizarre floating objects.

But after weeks of refining techniques/instructions, I came up with a pipeline that is now producing pretty decent results.

I'm not finished yet, but I think it's worth showing, and I wouldn't mind some feedback.

It's very much WIP — I haven't spent time on the trees and props yet, which is why the trees basically show how the buildings looked when I first started trying.

The first 2 images are from the latest refined pipeline; the quality is improving with every small edit to the pipeline. Image 3 shows green squares, but that's a grid thing, not part of the building model.

The later images show the evolution. The last picture is the very first time Claude tried to make an in-game model. There was a phase in between where it tried to add props, but they were flying all over the place or clipping through walls — a lot of very unrealistic stuff, but I have no screenshots of those, sadly.

Edit because everyone is asking how I'll be honest, The asset generator got kinda entangled with my game code. I never expected it to work this well. Im currently in the process of extracting that part of the code and putting it separate. Its also tuned for classical roman inputs atm but I will make it input agnostic and just ask for some art direction.

As I said in chat it's basically claude driving blender with python scripts. Based on a multi agentic flow managed by a whole bunch of memory files.

I kept most of my memory systems pretty structured and separate so im confident I can extract the code I just didn't see any need for it so far.

edit 2 I successfully extracted the code and managed to make it a standalone asset generator. Some logic got lost in the process which I will rebuild which slightly reduces quality of fe the roof,

the prototype works of a reference image atn. You can see the results in the chat below one the first attempt it managed to pivot to classical Japanese architecture and provide a decent result (this was on a reduced pipeline to spare my own tokens to prove a prototype).

Wilson, lead ClaudeAI modbot

TL;DR of the discussion generated automatically after 80 comments.

Alright, settle down, class. The consensus is that **everyone's mind is blown and they are all begging OP for the "secret sauce."** This isn't your grandma's 3D modeling.

The main takeaway is that OP has created a seriously impressive and highly automated 3D asset pipeline for their city-builder game. While others are struggling to make anything but cursed 3D pigs, OP is cranking out detailed Roman buildings.

Here's the deal on how they're doing it:

- **It's NOT the standard Blender MCP.** A lot of you are stuck on that, but OP confirmed they are not using it.
- Instead, OP built a **custom, multi-agentic system where Claude Code writes and executes Python scripts to directly control Blender.**
- The workflow is wild: OP just gives a high-level prompt (e.g., "build a temple of Apollo"). The system then automatically finds reference images, builds the model, iterates on it with an internal feedback loop, and even wires the final asset into the game engine for performance testing.
- OP is currently extracting this asset generator from their game code to make it a standalone tool that can work from image inputs or different style prompts. They've already shown a successful test adapting it to a new architectural style from a single image.

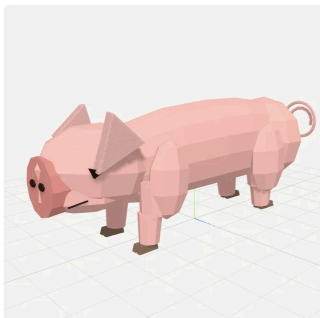

So yeah, while the rest of us are making blobs, OP has Claude running a whole automated 3D art studio. Keep an eye on this thread, as OP plans to share more once the tool is extracted.

 **RookieMan369** • 1d ago

Looks good, do you mind sharing your pipeline? I would be interested in creating models of characters and eventually rig them too.

 **LessRespects** • 1d ago

You gotta be shittin me. I've been working on a 3D model generation tool using Fable on my 20x plan since original Fable release and this is the best I could do 🤖

 **Rafilondon** • 20h ago

I don't know what your problem is, its beautiful *_*

 **maChine__** • 16h ago

Yah if it's for made a saucisson and f him
He is ok

I am using the Unreal Engine MCP. Perfect.

 killerbake • 1d ago

Same. Working greay

 kalabunga_1 • 19h ago

Is it creating models from scratch? Can it genuinely help with all the tiny details and stuff?

When I use Blender MCP, it can easily modify an existing 3D model, but creating something from scratch fails for me.

 PlayfulInterview984 • 18h ago

 Top 1% Commenter

I should clarify. Unreal MCP can find and us models. I use meshy for the actual mesh model

 2020NoMoreUsername • 1d ago

software?

 DiabloPonds **OP** • 1d ago

Claude Code and blender

 homiej420 • 1d ago

Yeah its really cool isnt it!

I havent dug this deep into getting a lot of detail in stuff mostly prototype proof of concept stuff right now, but this makes me super excited to really dig in for something

 DiabloPonds **OP** • 1d ago

It took me about 2 weeks to get results that met my minimum bar which I would ship as is. I do feel like there is MUCH room for making it better. The way I set it up at this point is incredible that it does everything I give it art and it starts making the model across the pipeline. It even does a GPU/CPU performance testing in game every time it wires in. model so the model doesn't cause any unexpected performance issues. All whiteout me interfering. From art to wired into the game and tested. I tried the pipeline with fable and the results were absolutely insane. Sadly I ran out of credits very fast haha.

I am going to make it work and then polish and make it look good, you know? Didn't want to get bogged down early on that stuff

Grahitek • 21h ago

How do you handle LODs? Can it simplify the same mesh without turning it into a mess?

Diabloponds OP • 20h ago

I haven't tried it yet tbh This is what Claude said about it even in the worst case we've never hit a *triangle* wall — the offline mesh work (killing bevel spam, smooth-by-angle normals, normal maps, and a surgical decimate only on temples) already keeps geometry cheap enough that per-building LODs would be solving a problem we don't have. it's on my roadmap to add though. It's an artifact of the fact the asset generator is a solution to my specific problem not a general asset generator. It might allow me to pump out nicer models. this is the coliseum for example **Deployed Colosseum (what actually ships): 40,962 triangles.**

- `assets/models/colosseum.glb` — **40,962 tris**, 82,813 verts, 20 primitives, 4.9 MB. This is the joined + decimated final asset (heroes get the 0.55 collapse).
- `staging/colosseum.glb` — 93,696 tris, 644 primitives, 13 MB. That's the raw pre-export candidate; the 644 primitives mean the static-geometry join hadn't run yet (it's not the shipped version).

Im guessing LOD would allow me to show even nicer models up close but id have to build a transition system? As I said im not really used to 3d model design. Id probably wait until I have access to fable again to try and implement this. It seems much better suited for it.

Grahitek • 19h ago

82k vertices is a lot. Well, depending on how many of those you intend to have on screen. Are you going to build a city with those assets?

Diabloponds OP • 19h ago

I have alr built large cities and the fps atm is high even when the sim is making multiple cities and even with a large city. As far as I know the simulation itself is the bottle neck not the renderer and even there I have a lot space atm im running it on apple silicon which doesn't even unlock all features of the engine im working with. The agents are given a budget to work with based on how many Times the structure should be placed. The colosseum is an exception because I only intend to put 1.

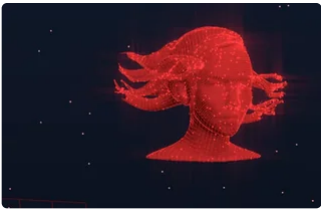

Vo_Mimbre • 1d ago

Can't speak for them, but Blender works very well with Claude via MCP. You can get there this way.

Automatic-Major-5801 • 20h ago

I'm also trying some 3D with Claude + Blender MCP but having a real hard time with it

Diabloponds OP • 19h ago

it is a lot of trial and error.

Diabloponds OP • 1d ago

thanks

Professionl_Feminist • 1d ago

Cool stuff. What file does Claude Code generate that you import into Blender?

Diabloponds OP • 1d ago

im not doing any file importing, Claude drives blender for me it does everything I just give it art directions. It keeps iterating until the result is satisfactory. The system I made basically just asks for direction and then goes to work automatically, I have used it to make 10 models at the same time and hook them into them game automatically. If it weren't for my token cap I could let it run non stop and populate my entire game with models. At first I had to manually review and give feedback constantly. But the later results have been getting so much better I hardly have to intervene anymore.

At this point im trying to see just how good it can get.

When its done with the game model it also wires it into the game code and renders it in game from all angles then it does another pass there to see the game engine doesn't cause any weird artifacts or changes.

homiej420 • 1d ago

Do you have like ten tabs in blender on at once or ten instances? Thats cool i feel like this is an area for potential of huge gain

Diabloponds OP • 1d ago

10 blender instances running atm. Which does Tax my CPU a bit lol.

homiej420 • 1d ago

Makes sense lol

Professionl_Feminist • 2h ago

Awesome

angrylittledv • 1d ago

So what's the process exactly since you said you DON'T use MCP, how do you then connect Claude to Blender? Do you copy paste python scripts from Claude Code chat?

retroeki • 2h ago

I dont believe this post. Impossible to get those results. Its a lie i tell you.

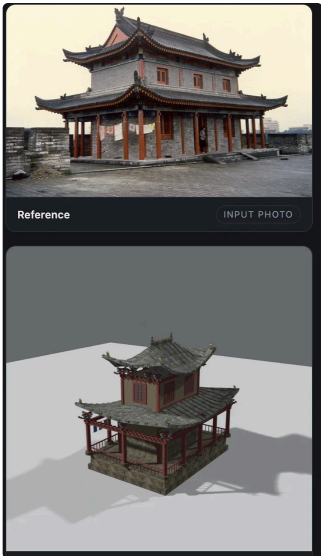

Diabloponds OP • 2h ago • Edited 2h ago

Skip to main content

```
You're right, let me put it in the chat directly. Let me render a clean hero view and embed it inline.  
Rendered hero view + base64 compact JPEG >  
The base64 was too big to inline through Bash — let me phish it and write the data URI to a file, then embed it in  
a proper view widget.  
Ran a command, read a file >  
The base64-inline path is too heavy (it truncates and bleeds context). The clean way to show you images in chat  
is an Artifact — I'll embed the renders via a script so the image data never bleeds the conversation. Let me set  
that up.  
Ran a command, used a tool >  
Now a full script that embeds the renders into a clean result page (base64 stays in the file, not the chat).  
Created a file, ran a command >  
wall_tower_result
```

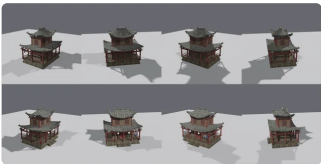

Im just done refining the pipeline a bit and trying another architectural style I asked claude to put it in between chats as proof but apparently that's not so easy. So it made some kind of html page

Diabloponds OP • 2h ago • Edited 1h ago

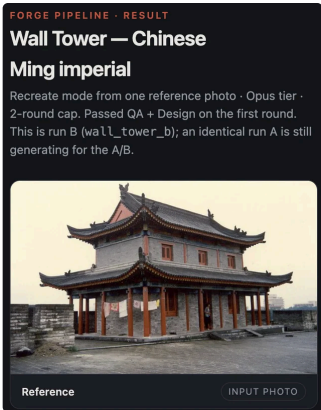

still has the same roof issues which I havent corrected for yet.

Diabloponds OP • 2h ago

Diabloponds OP • 2h ago

retroeki • 1h ago

I will be hoping this works out. Great job :)

RCuber • 23h ago

I am working on a city traffic simulation for understanding agentic coding, same as you I don't have any game and art experience. I used seedance 4.5 (openrouter) to generate images and then meshy ai to generate the 3d assets.

Efficient-Cat-1591 • 22h ago

Yeah i tried the same with Opus too, even with comfyui. No MCP, but python scripts. Havent tried with Fable 5 though - need some isometric 3d models for a game so might just try that.

Edit : what are you using for textures and shading?

Diabloponds [OP](#) • 21h ago

[Skip to main content](#)[1](#) [+](#) [Create](#) [🔔](#) [👤](#)

porch. **Vesta came out as a proper round tholos** — circular Corinthian colonnade, smooth marble dome + lantern finial, stepped round podium, cypress + altar —

Apollo (engine porch) — confirms the notes: the door + cella wall read as **dark brown wooden clapboard/plank siding** (the agent made every door member `timber` to dodge gold-bloom), and the cult statue is a **blocky robot** (ball head with two eye-dots on a boxy torso). Both are ship-blockers.

Vesta — the tholos itself is lovely (smooth marble dome, fluted Corinthian colonnade, dentil course), but the garland swags between columns are **bright pea-green "caterpillar" blobs** (the classic `ob.garland_swag` problem), and the votive figure is a little blocky. Otherwise it's near-bar.

Vesta is the quicker win. Let me read its script to fix the garlands (and check for any flame/blob issues).

MucilagusCumberbun • 21h ago

Age of empires Rise of Rome achieved.

Diablopods [OP](#) • 21h ago

100%

KURD_1_STAN • 21h ago

Are those just text to 3d or image to 3d? The latter is much harder for ai. I have obly tried it with sonnet and was a very simple room and it was a mess

Diablopods [OP](#) • 20h ago

I give it a building I want like build a temple of Apollo or a fishing wharf, and it looks up images on a few sources I whitelisted and goes from there.

KURD_1_STAN • 20h ago

Can u try a specific image, and not a known object?

Diablopods [OP](#) • 19h ago

Im extracting the asset generator out of my game atm, I will try once it have that up and running. Sadly im almost out of claude quota for the week. I let Fable refractor my entire game for optimisation/complex systems.

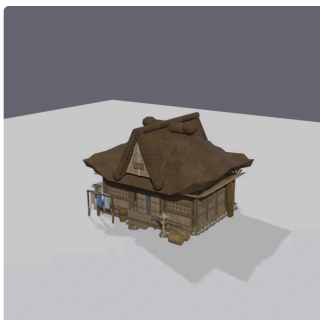

Diablopods [OP](#) • 16h ago

Right im done extracting, I removed everything roman related and changed it to work of a an image or user input chosen style.

Diablopods [OP](#) • 16h ago

[Skip to main content](#)

1

[+](#) Create**KURD_1_STAN** • 16h ago

Thank u, and it is better than i expected but a lot of stuff arent like the image. The base is def there but still not close to other image to 3d models.

**Diabloponds OP** • 16h ago

yes, that's cause I told it to use the image as reference I didn't hard limit it into replicating it. I did add that option as a placeholder the user will be able to choose use as reference or attempt exact copy. The exact copy workflow will need way stricter rules for the agent to work with which I havent designed yet. ATm its judged as a pass if it replicates the style of the image. But I can increase that rule if I want.

**RichieRichWannaBe** • 21h ago

Great stuff bro. I truly believe this may be foundation for monetizable SAAS.

**Safe-Bat-4806** • 19h ago

Looks better than Caesar 3 for sure

**Diabloponds OP** • 19h ago

I want to cross Caesar 3 with godly powers and intercity combat.

**Safe-Bat-4806** • 18h ago

Sounds fun. If you get it on steam and do an open beta test I would jump on it for sure.

**Diabloponds OP** • 18h ago

Im really excited most of the basic core logic is there (production chains, evolving houses, desirability, belief, castable god powers) fe today I angered Jupiter and part of my city was set on fire xD, the models are the slow hard work hence this asset generator. Once im satisfied with the models hitting the bar I'll publish it on steam as early access game with a beta.

**cannedAsauce** • 16h ago

This is super cool, I can't wait for you to share it once you finish extracting it and making it input agnostic

**Diabloponds OP** • 16h ago

im just done with a prototype, user gives an image and it goes through the pipeline. I fed it this image

**Diabloponds OP** • 16h ago

and it made

[Skip to main content](#)[1](#) [+](#) [Create](#) [🔔](#) [👤](#)

This my mvp attempt, it has roof issues which the main pipeline already got rid of but clearly it managed to adapt to a different style only based on a single image. I think with more refinement the quality can be improved a lot. I will attempt to build a generalized asset generator out of this.

Diabloponds [OP](#) • 16h ago • Edited 16h ago

it has some issue combining the 2 roof layers it sees in the image but in the other pipeline I already fixed this issue, just lost a bit of info when I extracted everything out of the game code and removed all the roman information.

cannedAsauce • 9h ago

Oh wow that's really impressive do you have the code on GitHub? I'd like to test it out

HighDefinist • 16h ago

[👤](#) Top 1% Commenter

It would definitely be great if you explained how you did this! Or alternatively, tell Claude to summarize the ideas of the algorithm.

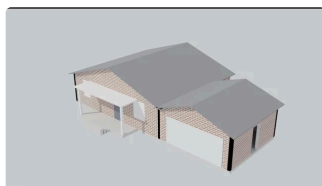

ShootTheMoon • 15h ago

Please export or have claude code create a guide for this. I am struggling with getting nice models to generate. And it sounds like many others here are as well.

ohyeahboy2021 • 13h ago

Great work I'd like to know what pipeline you use. Cause I taking a different way. I'm building an engine that gets ai to write code that creates the assets.

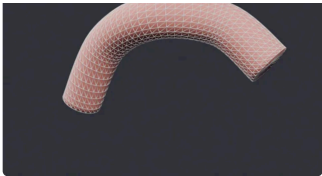

Hard objects are easier than organic natural ones right now.

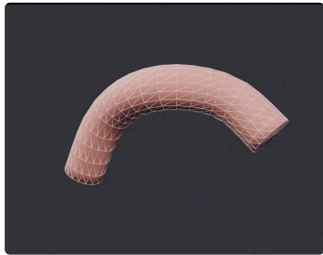

ohyeahboy2021 • 13h ago

Skip to main content

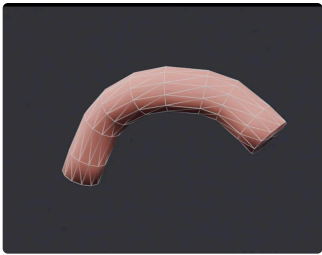

This is an example of testing ai create LOD by lowering the poly count in four stages on the same asset.

ohyeahboy2021 • 13h ago

ohyeahboy2021 • 13h ago

ohyeahboy2021 • 13h ago

ohyeahboy2021 • 13h ago

This is testing for fur on a leg lol 🤖 had some success but the goal is for ai to make any asset, be able to wire in animation, scripts, sound, and all using the engine that connects to like Blender, Unreal and all.

img

Diabloponds OP • 10h ago

sounds cool, I also had far more issues with organic objects.

ohyeahboy2021 • 8h ago

Yeah, but I'm basically trying to encode the process of how humans create 3d assets into an engine ai used to create 3d asset but in a way ai works best in.

If you ever have any updates let me know. I'm interested to see how your system works out. I wish you luck.

[Skip to main content](#)

1

[+](#) Create**Diabloponds** OP • 10h ago • Edited 9h ago

seems like it to me, as a programmer by education im on the front line of the hit but it is what it is. I don't think its useful to fight it. I cross posted this to a few other reddit pages not all of them AI focussed and got hate for it so I removed it again. Didn't even think of that.

**Siigari** • 9h ago
Philosopher

We've been using three.js for our rendering and have been happy with the results.

Small town setup: <https://i.imgur.com/7rLHGgQ.png>

**Diabloponds** OP • 9h ago

using bevy, most models here are wip. the good ones aren't built In this demo, in this demo there are 3 cities active. this is the player city. The npc cities are visible by zooming out to a world map and then zooming in on their city

**Siigari** • 9h ago
Philosopher

That is very cool man! What are you doing with this?

**Diabloponds** OP • 9h ago

At first an experiment to see if I could make a simulation, now im making a game which fuses many of my favorite games. City sim + god worship+ plus intercity warfare/trade because the npc cities are actually visible you can see your troop arrive on their map and fight there. if im satisfied ill put it on steam.

**Ok_Mathematician6075** • 8h ago
Top 1% Commenter

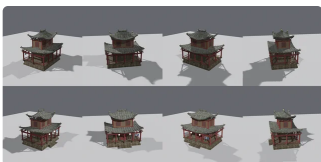

Oh you figured out how to use AI to create shit.

**Diabloponds** OP • 1h ago

I have upgraded the model somewhat after extracting it this is the first attempt at a Chinese building. Image fed

**Diabloponds** OP • 1h ago • Edited 1h ago

result

Materials per-part PBR

Openings modeled

Editable parametric builder

I will ad a decimator to the pipeline next

Designer_Truck7382 • 57m ago

have you tried going for a few weeks with another model cause it sounds like claude was your las try o you went farther through with it. cause we only have chatgpt, grok, and gemini

Diablopods OP • 55m ago

I have not tried any other model, claude is my first and only attempt. maybe I can pass certain work on to another model for better results that's an option worth exploring.

mglipford • 1m ago

This is amazing!

My agent and I are totally impressed by this and thank you for the inspiration!

Btw, please make an awesome city building game!

Nonomomomo2 • 1d ago

Genuinely impressive

Diablopods OP • 1d ago

thank you, im honestly astounded at Claude's capability
